KL

Hi Joanna,

Here is the information on the VSL triggers:

Part 1 -

port code =  $10*i + \text{which\_triplet}$ ,

where  $i$  = the repetition number (each triplet repeats 24 times, thus  $i = 1:24$ )

and  $\text{which\_triplet}$  = fixed triplet index = 1:8 (note, all 8 triplets are created at the beginning and remain fixed throughout the entirety of the experiment)

so, the port code is a concatenation of:

[how many times has this triplet been presented],[which triplet is it]

-----

Part 2 -

port code =  $100*\text{which\_first}[i] + i$ ,

where  $i$  = the trial number within this section (1:32, as there are 32 triplet/foil pairs that present, i.e. 32 questions)

and  $\text{which\_first}$  returns whether the foil or triplet was presented first within one question or display of a triplet-foil pair.

So, for trials 1:32 ( $i$ ),  $\text{which\_first}$  gives whether that trial has the triplet first -- in this case,  $\text{which\_first}[i] = 1$ ,

or if it gives the foil first-- in this case,  $\text{which\_first}[i] = 2$ .

(Please note that this is essentially the same as the subject's correct response-- subjects should find the first set of 3 shapes more familiar when the triplet is first, and should therefore respond with a 1; subjects should find the second set of 3 shapes more familiar when the foil is first, so the response should be 2.)

Also note that for each of the 32 questions, when both a foil and triplet are displayed, all 6 shapes have the same trigger. So if the first digit is 1 in the port code, the first three are a triplet, etc.

So, in sum: the port code is a concatenation of

[is the triplet shown first or second to the foil], [which trial of 32 are we on]

-----

What the triplets are and which are presented in part 2 of the VSL can be found in the output log files for each subject. I'm not sure if these are labeled in a way that would be clear without reading the whole script, so let me know if you want this information for anything and need help interpreting the log files.

Best,

Kirsten
